

The Heating Calculator for your Online Visibility

- ☑ Computation of heat demand
- ☑ Comparison of different heating systems
- ☑ Profitability analysis
- ☑ PDF reports

With the **Eternity Heating Calculator**, you can offer the visitors of your website an interactive tool for estimating the potential of an investment in a new heating system.

Precise

Unlike other solutions, the calculator simulates the designed system. The simulation takes several factors into account such as local temperature profiles, the heat distribution system and other variables.

End-customer oriented

In just a few steps, the customer receives an estimate of the potential of a new heating system. The results are then displayed in a visually pleasing and easily understandable way.

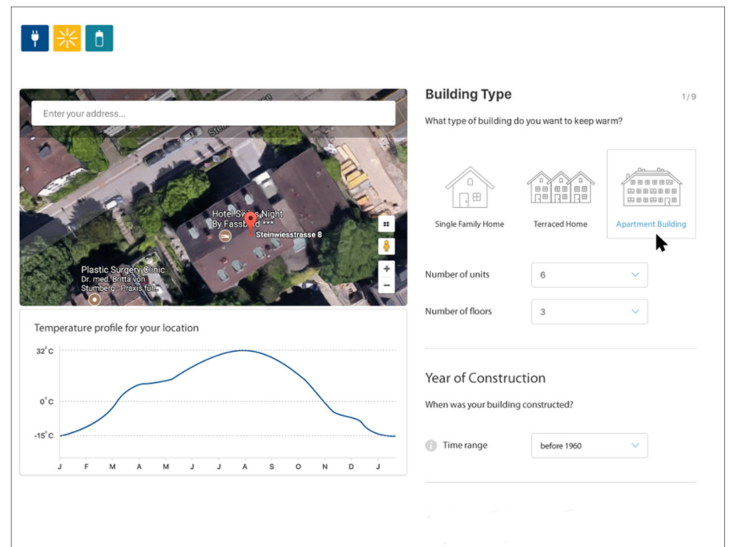

Individual

The Eternity Heating Calculator is technology-neutral and independent of the manufacturer. Colours and logo can be individually adapted to your company.

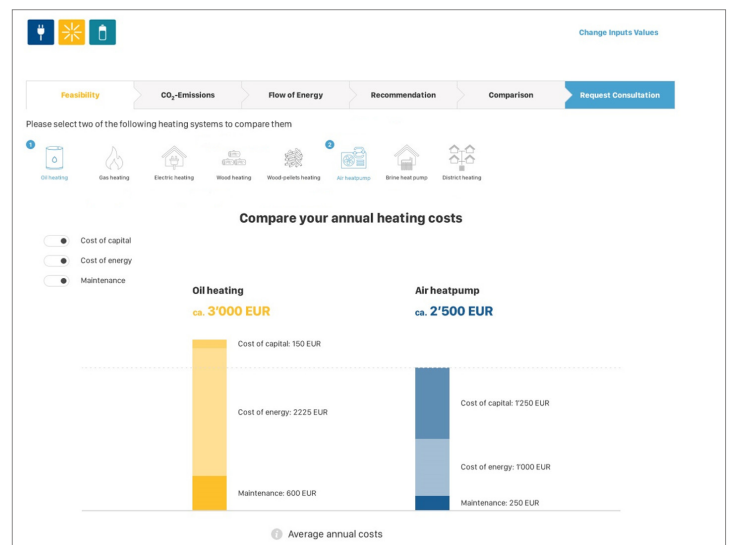

Multifunctional

If desired, the functionality of the Eternity Heating Calculator can be complemented with additional features such as PDF reports, a linkage to Eternity Expert Heat as well as other additional functions.

The screenshot shows the input form of the calculator. It includes a map view with an address input field, a temperature profile graph for a location, and a form for building details. The building type is set to 'Apartment Building'. The number of units is 6, and the number of floors is 3. The year of construction is set to 'before 1960'.
